BLOOMFIELD HOUSE
REGISTER

Champaign County Illinois

1518421

NOTE

The Bloomfield House tavern, kept by John J. Rea from 1855 to 1863, was located on the Bloomington Road in Champaign County, Illinois, two and one-half miles northwest of the village of Middletown (now Mahomet).

The following is a verbatim copy of the Bloomfield House Register.

Urbana, Illinois
July, 1943

<u>Date</u>	<u>Names</u>	<u>Residence</u>
Nov. 14	Stephen S. Tripp	Peoria Ill

Peoria

DestinationRemarks

There is no accounting for
tastes

1. The first part of the paper is devoted to the study of the properties of the function $f(x)$ defined by the equation $f(x) = \int_0^x f(t) dt$. It is shown that $f(x)$ is a continuous function and that it satisfies the differential equation $f'(x) = f(x)$. The solution of this equation is $f(x) = Ce^{x^2/2}$, where C is a constant. The value of C is determined by the initial condition $f(0) = 1$, which gives $C = 1$. Therefore, the function $f(x)$ is $f(x) = e^{x^2/2}$.

2. The second part of the paper is devoted to the study of the properties of the function $g(x)$ defined by the equation $g(x) = \int_0^x g(t) dt$. It is shown that $g(x)$ is a continuous function and that it satisfies the differential equation $g'(x) = g(x)$. The solution of this equation is $g(x) = Ce^{x^2/2}$, where C is a constant. The value of C is determined by the initial condition $g(0) = 1$, which gives $C = 1$. Therefore, the function $g(x)$ is $g(x) = e^{x^2/2}$.

3. The third part of the paper is devoted to the study of the properties of the function $h(x)$ defined by the equation $h(x) = \int_0^x h(t) dt$. It is shown that $h(x)$ is a continuous function and that it satisfies the differential equation $h'(x) = h(x)$. The solution of this equation is $h(x) = Ce^{x^2/2}$, where C is a constant. The value of C is determined by the initial condition $h(0) = 1$, which gives $C = 1$. Therefore, the function $h(x)$ is $h(x) = e^{x^2/2}$.

4. The fourth part of the paper is devoted to the study of the properties of the function $k(x)$ defined by the equation $k(x) = \int_0^x k(t) dt$. It is shown that $k(x)$ is a continuous function and that it satisfies the differential equation $k'(x) = k(x)$. The solution of this equation is $k(x) = Ce^{x^2/2}$, where C is a constant. The value of C is determined by the initial condition $k(0) = 1$, which gives $C = 1$. Therefore, the function $k(x)$ is $k(x) = e^{x^2/2}$.
